To whom It may concern,

The Global Drug Concepts drug awareness program was one of the most comprehensive, informative and interactive programs that I have ever attended. The GDC instructors have clearly had enormous experience in the field and are up to date on all aspects of the drug abuse domain. They have presented to multiple groups throughout the United States.

The training is especially important for companies to assist them in their Drug Free Workplace certifications. This education is imperative for supervisors, managers and employees. It educates our management on reasonable suspicion, current drug trends, paraphernalia and physiological affects of all drugs of abuse.
